A3

Concepts and Wireframes

For my A3, I will be working on a Multipage Portfolio Website. I wish to make a website that I can update later even after the studio ends. I want to try including everything that I have learnt till now and explore a few more libraries.
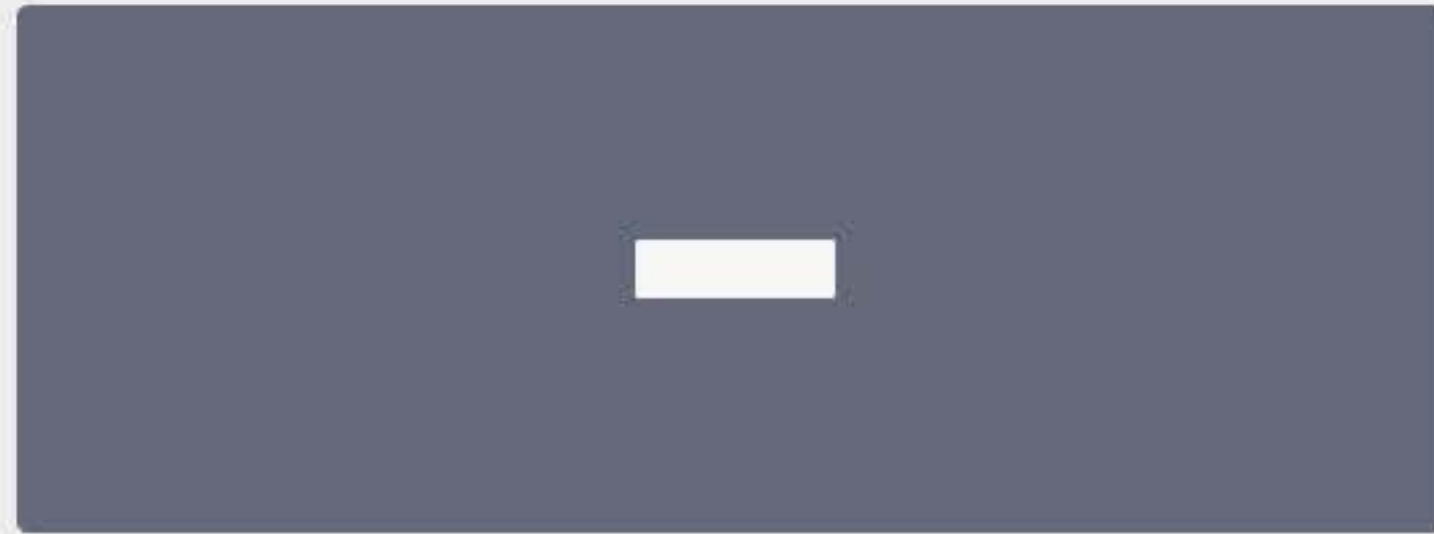

It will contain an interactive piece where the user can move the cursor and interact with website, a space for my projects which will either have the filter and soring library - Isotope or a simple layout which different sections, an About Me section for my details and a CV page. I will ideally be using multiple libraries like p5js, model viewer, slider, filter and sort out - isotope, etc. which will depend on how much time it will take.
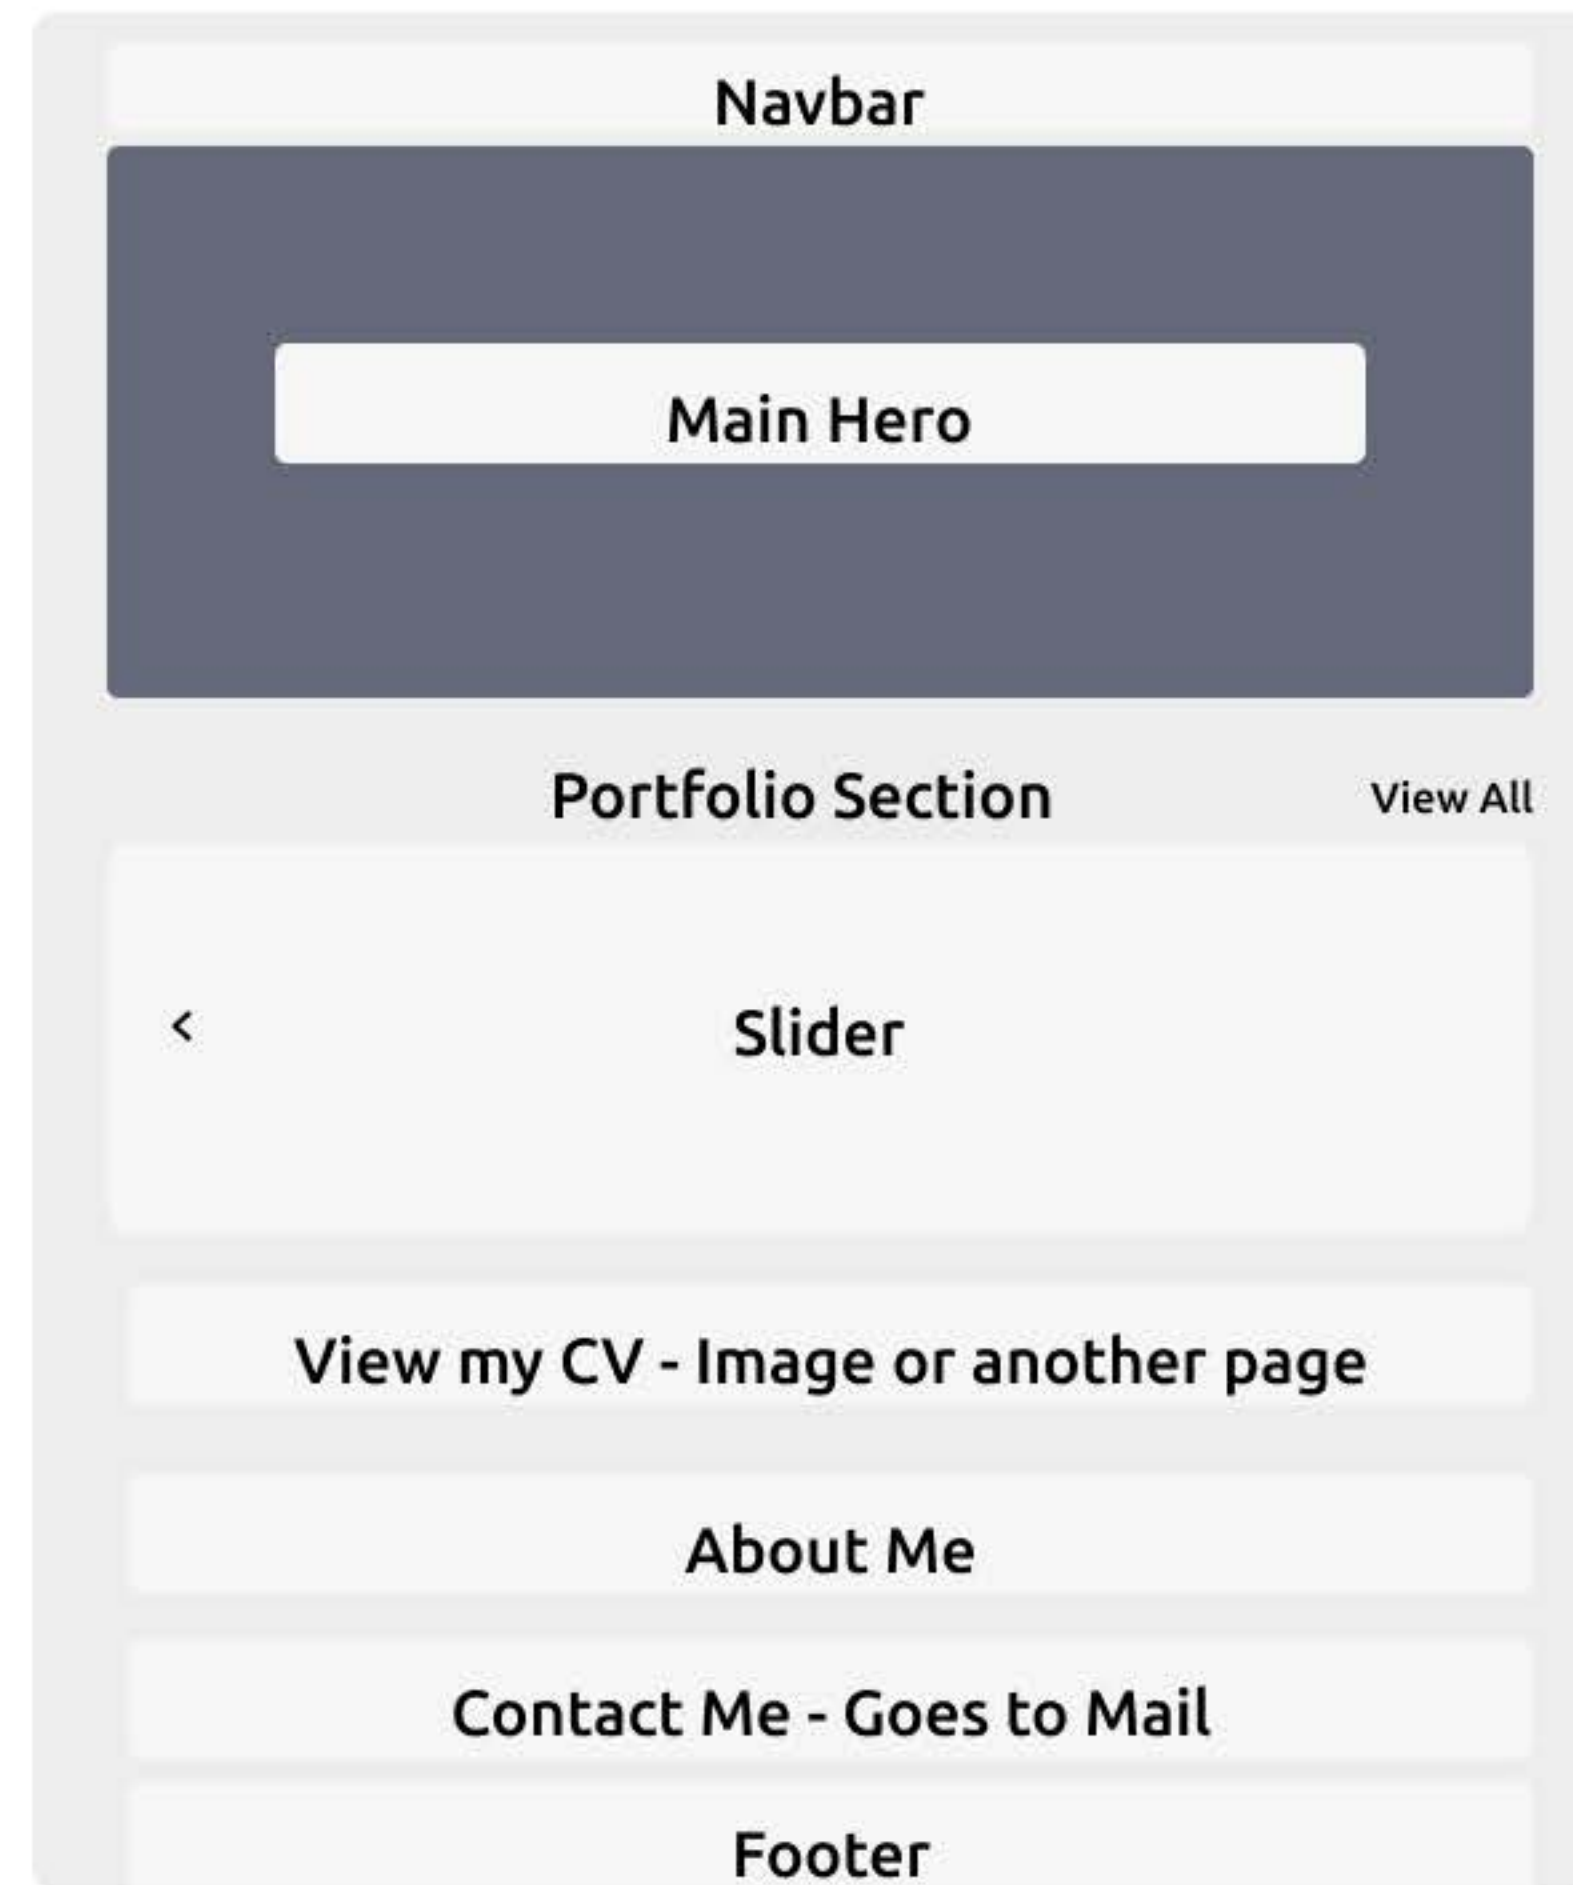

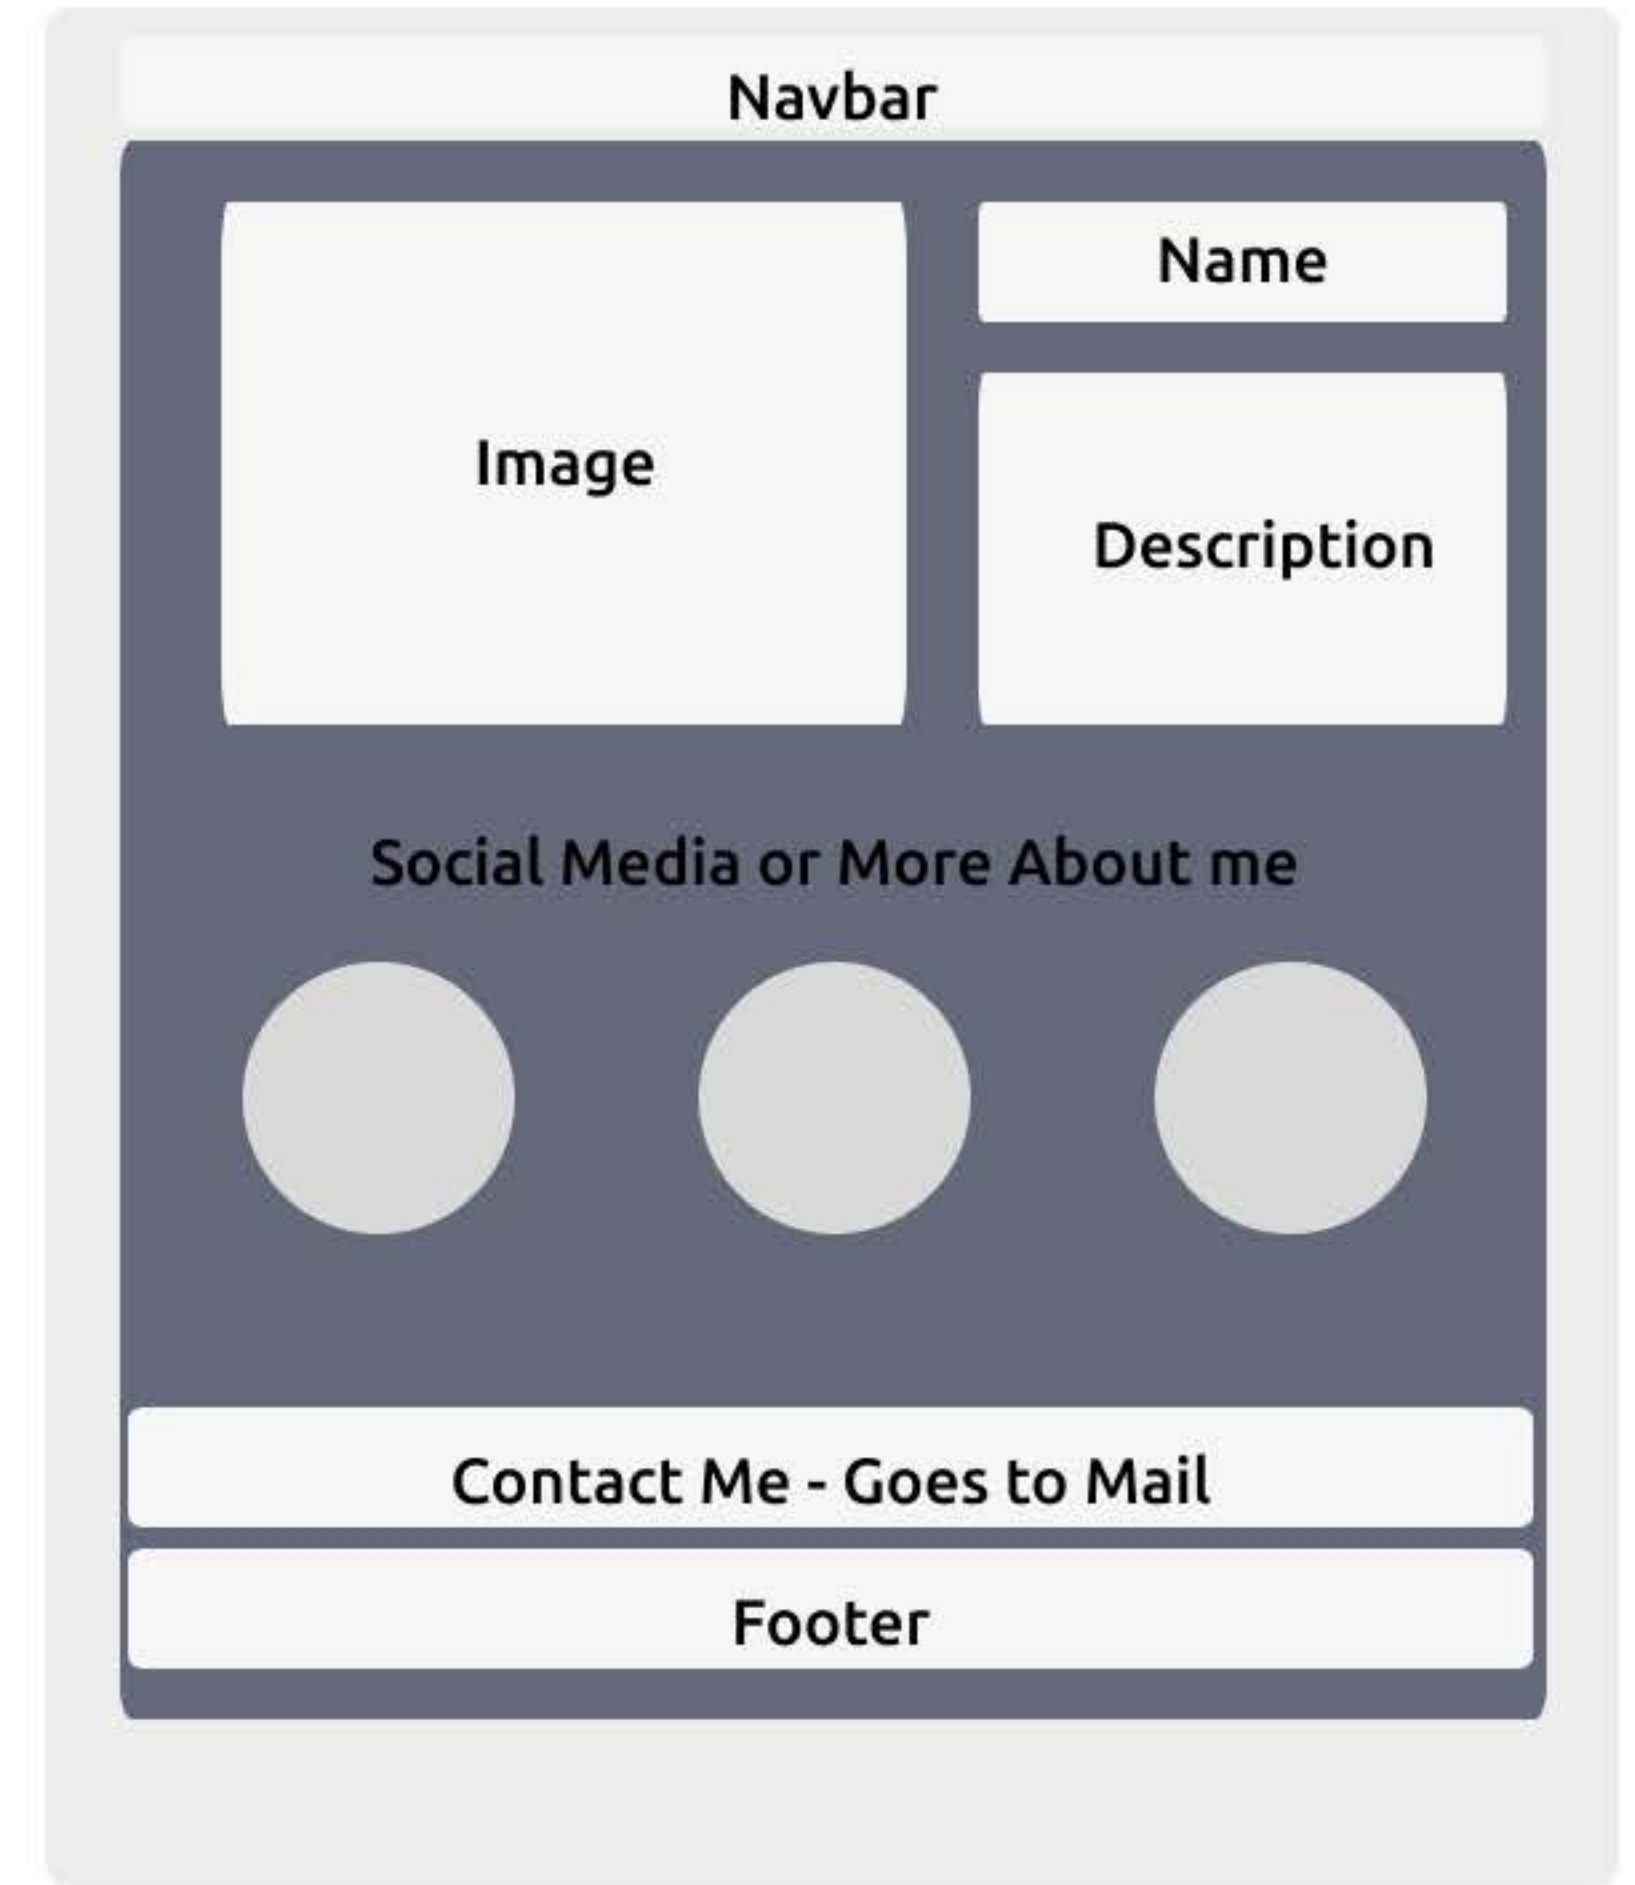

Initial Sketches

First Screen - Interactive - this page leads to the main portfolio
